Conversion and its related terms yield and selectivity are important terms in chemical reaction engineering. They are described as ratios of how much of a reactant has reacted ( $X$  — conversion, normally between zero and one), how much of a desired product was formed ( $Y$  — yield, normally also between zero and one) and how much desired product was formed in ratio to the undesired product(s) ...

Chemistry is too universal and dynamically-changing a subject to be confined to a fixed definition; it might be better to think of chemistry more as a point of view that places its major focus on the structure and properties of substances— particular kinds of matter— and especially on the changes that they undergo.. In some ways, physics might be considered more "fundamental" to the extent ...
